## **Preface**

As an additional resource to help school divisions develop curricula aligned to the 2003 Standards of Learning, the Virginia Department of Education has developed sample scope and sequence documents for kindergarten through grade eight and for core high school courses. These sample documents provide guidance on how the essential knowledge, skills, and processes that are identified in the Standards of Learning and the Standards of Learning Curriculum Frameworks may be introduced to students in a logical, sequential, and meaningful manner.

These sample scope and sequence documents are intended to serve as general guides to help teachers and curriculum developers align their curricula and instruction to support the Standards of Learning. Each sample document is organized around specific topics to help teachers present information in an organized, articulated manner. Also included are correlations to the Standards of Learning for that curricular area for a particular grade level or course, as well as ideas for classroom assessments and teaching resources.

The sample scope and sequence documents are not intended to prescribe how curriculum should be developed or how instruction should be delivered. Instead, they provide examples showing how teachers and school divisions might present to students in a logical and effective manner information that has been aligned with the Standards of Learning. School divisions that need assistance in developing curricula aligned with the Standards of Learning are encouraged to consider the sample scope and sequence guides. Teachers who use the documents should correlate the content identified in the guides with available instructional resources and develop lesson plans to support instruction.

The *Science Standards of Learning Sample Scope and Sequence* and the *Science Standards of Learning Curriculum Framework* can be found in both PDF and Microsoft Word file formats on the Virginia Department of Education's Web site at <http://www.doe.virginia.gov/VDOE/Instruction/sol.html>.

## **Introduction**

Chemistry should be investigative and continually involve students in the scientific process. Students should be given numerous opportunities to evaluate and analyze data, particularly data they have collected. The Standards of Learning processes delineated in CH.1 are referenced numerous times in this sample scope and sequence. The classroom teacher is encouraged to incorporate them into many other parts of the curriculum as well. It is particularly important to review relevant safety procedures each time students begin laboratory experimentation.

This document is intended as a general guide to help teachers and schools frame a curriculum that incorporates the fundamentals of secondary science courses and to provide a correlation of those fundamentals to the Virginia Standards of Learning. It is organized around specific topics and includes correlations to the Science Standards of Learning, as well as ideas for assessments and resources. This document is not intended as a script for either curriculum developers or instruction, but it will provide teachers and curriculum developers a place to begin building a curriculum.

| <b>Organizing Topics</b>                             | <b>Related Standards of Learning</b>                          |
|--|---|
| <b>Introduction to Chemistry</b>                     | <b>CH.1 a, b, c, d, e, g, h, i</b>                            |
| <b>Atomic Structure</b>                              | <b>CH.1 f, g, i; CH.2 a, b, c, i</b>                          |
| <b>Properties of Matter</b>                          | <b>CH.1 a, b, c, d, e, f, g, h; CH.2 h; CH.5 c, e, f</b>      |
| <b>Electron Configuration and the Periodic Table</b> | <b>CH.1 g; CH.2 a, b, c, d, e, f, g</b>                       |
| <b>Bonding, Nomenclature, and Formula Writing</b>    | <b>CH.1 g, h; CH.2 a, b, c, g, h; CH.3 a, b, c, d; CH.5 f</b> |
| <b>Chemical Reactions and Equations</b>              | <b>CH.1 a, b, c; CH.3 d, e, f; CH.4 b, f</b>                  |
| <b>Stoichiometry</b>                                 | <b>CH.1 a, f, g; CH.4 a, b</b>                                |
| <b>Kinetic Theory</b>                                | <b>CH.1 f, g, h; CH.4 c, d, e; CH.5 a-f</b>                   |
| <b>Acids/Bases and Electrolytes</b>                  | <b>CH.1 a, b, c; CH.4 g</b>                                   |
